CR308 Sound Level Meter

Features

- Calibrated Type 2 Sound Level Meter
- Fast and Slow response
- A and C frequency weighting
- Back-light for darker environments
- Min, Max and Peak measurement
- AC and DC outputs
- Calibration certificate included

Applications

- Basic noise checks
- OSHA occupational noise surveys
- Alarm installation and testing
- Machinery and factory noise

Overview

The CR308 is an easy to use sound level meter that meets the standards to Type 2, as required by many noise measurement standards. It measures the Fast or Slow sound level with both "A" and "C" frequency weightings.

Standards

- ANSI S1.4 and IEC 60651 to Type 2
- IEC 61672 Class 2

It is essential that a sound level meter meets these standards if it is to be used for any important measurements, particularly those that involve any other legal purposes. The CR308 meets the strict demands of ANSI S1.4, IEC 61672 and IEC 60651 and is provided with a Calibration Certificate at no extra cost, so you can make your noise measurements with confidence.

Noise Measurements

The CR308 measures the instantaneous sound level with either **A** or **C** weighting. Most noise regulations require **A** weighting. It also has both **Fast** and **Slow** time response. Many regulations require **Fast** but some, like the US OSHA regulations use **Slow** as it is easier to average by eye.

The meter also provides the Maximum and Minimum readings for whichever weightings are selected. A Reset button is used to clear and start the next min/max measurement.

Outputs

An AC output and optional DC output mean this meter can be connected to a level recorder, PC equipped with an A/D converter or integrated with another data logging system.

See Specifications tab for more details about the standards and noise measurement range.
